

Goldcrest

Scientific name: *Regulus regulus*
Manx name: Drean buigh, Ushag y juys
Length: 9cm from tip of beak to tip of tail
Wingspan: 14cm
Weight: 6g

The Goldcrest is the UK's smallest bird. They have small thin beaks ideal for eating tiny foods like spiders, moth eggs and small insects that live in between pine needles. There are more Goldcrests in the UK and Isle of Man in the winter months as they migrate from colder countries, such as Sweden and Finland.
