Education Programme Long-tailed Tit

Scientific name:Aegithalos caudatusManx name:Caillagh Veg yn ArbylLength:14cm from tip of beak to tip of tailWingspan:16cm – 19cmWeight:7g - 10g

Long-tailed Tits are like flying lollypops with their tiny bodies and long tails! They are noisy and sociable birds and are nearly always seen in large flocks. They live on the Isle of Man all year round and they eat insects in summer but rely on seeds and bird feeders in the winter to help them survive the cold. A Long-tailed Tit nest is made using spiders webs.

Fun fact: A Long-tailed Tit nest is built like a sleeping bag and stuffed full of feathers!
