

Instructions:

1. Colour the duck with wax crayon.
2. Make sure you cover all the white, if there are any gaps water will get through!
3. Use a spray bottle to spray water onto the wax. If you don't have a spray bottle you can drip water onto the wax from your fingertips.
4. Look at the picture; see what happens to the water on the top of the wax.
5. Look at the other side of the paper; has any water got through the wax?
