Endorsements for BoCCIoM 2021

Manx BirdLife works
in partnership with

BoCCIoM 2021 is endorsed by the Royal Society for the Protection of Birds,
the Manx Ornithological Society, Manx National Heritage and Manx Wildlife Trust.

Manx National Heritage
Eiraght Ashoonagh Vannin

Assessment criteria

For comparability and as far as practicable, BoCCIoM closely follows BoCC4 (Eaton et al. 2015) and BoCC Ireland 2014-19 (Colhoun & Cummins 2013). Where specific criteria or thresholds are inappropriate or data are lacking, these have been modified or not used:

IUCN **Global Conservation Status**

Red = Species listed by IUCN (2021) as Critically Endangered, Endangered or Vulnerable.

SPEC **European Conservation Status**

Red = Species listed by BirdLife International (2017) under SPEC1.

Amber = Species listed under SPEC2 or SPEC3.

HD, HDR **Historical decline in breeding population**

Red = Species that have undergone severe decline between 1700 and 1986, with no recovery from that decline (denoted **HD**).

Amber = Species that have undergone severe decline, but which have recovered or shown significant signs of recovery (denoted **HDR**).

BDp **Decline in breeding population**

Estimated maximum number of definite, probable and possible breeding pairs per annum.

BDp1 Short-term decline 1998-2003 to 2006-16, except seabirds for which 1999 to 2017-18:

Red \geq 50% decline, **Amber** = 25-49% decline.

BDp2 Longer-term decline 1977-81 to 2006-16, except seabirds for which 1969-70 to 2017-18: **Red** \geq 50% decline, **Amber** = 25-49% decline.

WDp **Decline in non-breeding population**

Not used due to lack of data.

BDr **Decline in breeding range**

Range = number of squares in which definite, probable or possible breeding recorded.

BDr2 is possible only at 5km square resolution, for which loss of sensitivity in identifying range declines is offset by more sensitive Red and Amber thresholds than for BDr1 which can be assessed at a resolution of 1km squares.

BDr1 Short-term decline 1998-2003 to 2006-16, except seabirds for which 1999 to 2017-18, assessed at 1km square resolution: **Red** \geq 50% decline, **Amber** = 25-49% decline.

BDr2 Longer-term decline 1977-81 to 2006-16, except seabirds for which 1977-81 to 2017-18, assessed at 5km square resolution: **Red** \geq 35% decline, **Amber** = 15-34% decline.

WDr **Decline in non-breeding range**

As BDp, not used.

BR #

Breeding rarity

Estimated annual breeding population (pairs) 2006-16, except seabirds for which 2017-18 (AON/AOS/IND; mean counts where available): Amber ≤10 pairs.

The definition of a rare breeding bird in the Isle of Man originates from the Manx Wildlife Sites Systems Handbook (Keehan 1999), being “fewer than 10 breeding pairs on the Island”. For BoCCIoM, this is nuanced to 10 or fewer.

WR

Winter rarity

Estimated overwintering population (IND) 1998-2003, updated using the Manx Ornithological Database and Peregrine (var. Volumes): Amber ≤50 individuals.

Counts are of overwintering individuals (November to February), excluding late autumn/early spring passage migrants and exceptional influxes of weather-driven or irruptive species.

BL

Localised breeding population

Number of 1km squares in which definite or probable breeding recorded 2006-2016, except seabirds for which 2017-18: Amber ≤5% of squares.

WL

Localised wintering population

Number of 1km squares in which overwintering (November to February) individuals recorded 1998-2003, updated using the Manx Ornithological Database and Peregrine (var. editions): Amber ≤5% of squares.

BI ** / WI **

Breeding/Wintering importance within UK & IoM

IoM population as per BR/WR compared to combined UK & IoM estimates (Woodward et al. 2020): Amber ≥0.5% of UK & IoM.

BIE # / WIE #

Breeding/Wintering importance within Europe

IoM population as BR/WR compared to European population (BirdLife International 2017). BIE and WIE were not in the formal assessment but are included to highlight species for which the Isle of Man has a significant proportion of the total European population.

To avoid over-estimation of BR, BI and BIE for Common Guillemot *Uria aalge*, Razorbill *Alca torda* and Black Guillemot *Cephus grylle*, the standard census count unit of IND is treated as one half of a pair (i.e. 2 IND = 1 pair).

* IoM Government adopts 0.5% of the British Isles population as the ‘internationally important’ threshold for its national populations as given in the Manx Wildlife Sites Handbook (Manx Wildlife Trust 2008), but uses 1% for designation of Manx Areas of Special Scientific Interest (ASSI) under the Island’s Wildlife Act (IoM Gov 1990). At 221 square miles (572km²), the terrestrial Island occupies 0.18% of the combined area of the UK & IoM. Hence, the threshold of 0.5% is considered the more appropriate for BoCCIoM assessment of importance in the UK & IoM context.

Key to tables

AA	Authors' adjustment (in superscript after species name), where the authors found compelling reason to adjust the species' final status.
aR, aA, aG	Authors' inference (aR = Red, aA = Amber, aG = Green) where data are lacking, but where assessment can be inferred from the literature.
nb	Non-breeder (Does not currently breed).
nd	No valid/complete data available for assessment.
nw	Non-winterer (Does not currently overwinter).

Online publication

BoCCIoM 2021 is available online at <http://manxbirdlife.im/bocciom/> and as a paper published in *British Birds* September 2021 Vol 114.

Acknowledgements

Manx BirdLife would like to thank the Scheinberg Family without whose support BoCCIoM 2021 would not have been possible.

The authors are indebted to Gillian Gilbert, Principal Conservation Scientist for RSPB Northern Ireland. We also thank David Bellamy, Pat Cullen, Adam Denard, Anne-Marie McDevitt, Allen S. Moore, Alice Morris, Louise Samson, Aron Sapsford and Richard Selman for their past and recent inputs to the BoCCIoM project and assistance with this paper.

We should also like to thank the many fieldworkers and support teams who have helped to compile the datasets used in this assessment.

Translation into Manx Gaelic has been kindly provided by <https://www.culturevannin.im>.

Finally, we thank the Manx Ornithological Society, Manx Wildlife Trust, Manx National Heritage and the Royal Society for the Protection of Birds for their endorsement of the project and its results.
